LAKSHAY KUNDARIYA

Data Science & Machine Learning Developer | Python | AI / RAG Applications

Jaipur, Rajasthan, India • +91 9929728234 • lakshaykundariyayt@gmail.com

linkedin.com/in/lakshay-kundariya • github.com/Lakshay14ru

PROFESSIONAL SUMMARY

Data Science undergraduate (BCA, Apex University) and Python Developer Intern with hands-on experience building end-to-end AI and data applications, including a Retrieval-Augmented Generation (RAG) analytics platform and ANN-based machine learning models. Proficient in the complete workflow: data preprocessing, feature engineering, model training and evaluation, and delivering working applications with Streamlit. Known for hands-on problem solving, systematic debugging, clear technical documentation, and the ability to pick up new technologies quickly when a project demands it. Seeking internship and entry-level opportunities in **Data Science, Machine Learning, AI/ML and Python Development** to contribute to real-world projects while learning from experienced professionals.

CORE COMPETENCIES

- ML & Neural Networks
- RAG Pipelines
- Data Analysis & EDA
- Feature Engineering
- Semantic Search & Embeddings
- Model Training & Evaluation
- Python Application Development
- SQL & Databases
- Debugging & Problem Solving

TECHNICAL SKILLS

Programming	Python, SQL, Java (foundational)
Data Science & ML	Pandas, NumPy, Scikit-learn, Matplotlib, Exploratory Data Analysis, Data Cleaning, Feature Engineering, Model Evaluation, KNN, Decision Trees
Deep Learning	TensorFlow / Keras, Artificial Neural Networks (ANN), Multi-Layer Perceptron (MLP)
GenAI & RAG	Sentence Transformers, ChromaDB, Vector Embeddings, Semantic Search, RAG Pipelines
Databases	MySQL, Relational DBMS, MongoDB (foundational)
Tools & Platforms	Streamlit, Git, GitHub, VS Code, Jupyter Notebook, Android Studio
Computer Science	Object-Oriented Programming, File Handling, Data Structures & Algorithms (in progress)

PROFESSIONAL EXPERIENCE

Python Developer Intern

2025 – Present

Saiket Systems

- Contributed to **InsightGPT Lite**, an AI-powered analytics and RAG platform, building features for data preprocessing, analysis, visualization, AI-generated insights and document-based retrieval.
- Gained end-to-end exposure to building an AI application: integrating multiple libraries and services, debugging issues, and converting requirements into functional features.
- Delivered Python programming tasks across live project modules within a structured software development workflow (version control, code review, task tracking).
- Traced and resolved functional errors in existing scripts, reducing rework on later tasks.
- Documented technical work and communicated progress and implementation ideas clearly to team members.

PROJECTS

InsightGPT Lite – AI Data Analytics & RAG Platform — 2025

Tech stack: Python, Streamlit, Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow/Keras, Sentence Transformers, ChromaDB, Git/GitHub

- Built a full-stack platform that lets non-technical users explore any uploaded dataset through natural-language queries and AI-generated insights.
- Automated data preprocessing: CSV ingestion, missing-value detection, duplicate removal and dataset profiling, with interactive visualizations for analysis.
- Integrated Sentence Transformers with ChromaDB to generate vector embeddings and enable semantic search and document-based retrieval through a RAG pipeline.
- Designed a modular, scalable and user-friendly architecture, maintained with Git and GitHub.

ANN-Based Machine Learning Models — 2025

Tech stack: Python, TensorFlow/Keras, Scikit-learn, Pandas, NumPy

- Designed, trained and evaluated artificial neural network models in Keras, with data preprocessing and performance evaluation.
- Presented **Image Classification Using Multi-Layer Perceptron (MLP)** as part of the Neural Networks course.

Titanic Survival Prediction — 2024

Tech stack: Python, Pandas, NumPy, Matplotlib, Scikit-learn

- Cleaned the dataset and engineered features, handling missing and categorical values to improve input quality.
- Trained and compared KNN and Decision Tree classifiers, benchmarking accuracy to select the strongest model.

Indian Railway Ticket Booking System — 2024

Tech stack: Python, Object-Oriented Programming, File Handling

- Developed a console-based reservation system supporting ticket booking, cancellation and passenger record management through file handling.
- Implemented seat allocation and real-time availability checks to prevent double-booking and keep records consistent.

EDUCATION

Bachelor of Computer Application (Data Science) — 09/2024 – 06/2027

Apex University, Jaipur | CGPA: 7.88 / 10 | Currently in 5th semester (final year)

- **Areas of study:** Machine Learning, Neural Networks, Python, SQL & DBMS, Data Structures & Algorithms; self-study in Deep Learning.

Senior Secondary Education (PCM)

Score: 64.80%

CERTIFICATIONS

Python and SQL for Data Science	**Scaler Topics**
Generative AI Literacy	**Simplilearn**
MongoDB Overview: Core Concepts and Architecture (Skill Badge)	**MongoDB**
Be10x AI Tools Workshop	**Be10x**
Python Using AI Workshop	**AI for Techies**

STRENGTHS & ACHIEVEMENTS

- **Communication:** strong written and verbal skills; documents technical work and explains concepts in an understandable way.
- **Collaboration:** shares project progress, discusses implementation ideas, and works effectively within a team.
- **Learning agility:** hands-on and curious; picks up new technologies quickly, currently deepening DSA, DBMS and Deep Learning.
- **Achievements:** independently built multiple end-to-end Python/ML projects (data engineering, classification, neural networks, RAG) and earned industry certifications plus a MongoDB skill badge.
